Questions about the CoinGlass API

👍 About CoinGlass API

1. What is CoinGlass API?

CoinGlass API is a leading global crypto market data infrastructure platform designed for analysts, quantitative teams, institutional investors, and developers.

Since its founding in 2019, CoinGlass has focused on derivatives, spot, options, ETF, and on-chain data, providing a unified data framework that enables users to better understand global crypto market structure and capital flows.

CoinGlass API provides tick-by-tick raw trade data, order book depth, open interest, funding rates, liquidation data, order flow metrics, and footprint analytics. These multi-dimensional market structure indicators provide a reliable data foundation for high-precision market analysis, quantitative research, and trading strategy development.

As the crypto market continues to evolve rapidly, market data sources have become increasingly complex: inconsistent exchange data formats, incomplete historical datasets, and the high cost of collecting high-frequency data have long challenged developers and research institutions. CoinGlass solves these issues through real-time data collection, tick-level processing, and professional data modeling, transforming massive raw datasets into low-latency, reliable, and ready-to-use API services. This allows users to access global market insights without building complex internal data infrastructure.

2. What data does CoinGlass API provide?

Derivatives & Futures Markets:
Real-time liquidation statistics, liquidation heatmaps, Max Pain indicators, historical open interest, funding rates (weighted + arbitrage APR), long/short ratios (top traders / taker volume), and options open interest & Max Pain.

Spot Market Data:
Real-time prices, taker trading volume, Net inflows/outflows (Netflow), L2/L3 order book depth, and multi-timeframe technical indicator snapshots (MACD / RSI / ATR, etc.).

Advanced Order Flow Data:
Tick-level order book snapshots (L2 & L3), volume footprint charts, cumulative volume delta (CVD / Aggregated CVD), and liquidity heatmaps.

Real-Time Market Monitoring:
Futures / spot price and open interest anomaly alerts, and multi-indicator aggregated asset screening lists.

Institutional & Whale Capital Data:
Hyperliquid whale positions and PnL distribution, ETF net inflows / AUM, Grayscale Bitcoin holdings, Coinbase Premium Index, exchange Proof-of-Reserves (PoR), and whale transfer alerts.

On-Chain & Macro Indicators:
AHR999, Puell Multiple, S2F, Fear & Greed Index, BTC Dominance, Bitcoin vs M2 Growth, token unlock schedules, market news flashes, and economic calendar events.

3. Why choose CoinGlass API?

CoinGlass stands out through **data depth, reliability, and unified infrastructure**:

1. **Tick-by-tick order book snapshots + full raw datasets + aggregated data + over 8 years of high-frequency historical data (data completeness >99.9%)**, enabling high-precision backtesting and machine learning workflows.
2. **Real-time API access + unified cross-exchange data model**, making it easy to build cross-market analytics systems.
3. **Coverage across 30+ major exchanges**, including Binance, OKX, Bybit, Deribit, Hyperliquid, and more — with continuous expansion.

4.Trusted by Global Leading Institutions

CoinGlass API is trusted by leading exchanges, financial institutions, and data providers worldwide, including Binance, TradingView, CoinMarketCap, Bloomberg, Coinbase, Bybit, Reuters, Fidelity, Crypto.com, CoinDesk, The Block, Bitget, Gate, and many others.

Through stable, professional, and highly reliable data infrastructure, CoinGlass continues to provide trusted market data solutions for individual investors, quantitative teams, and institutional participants around the world.
